Excel

Day: Monday

1. Introduction
2. Basics funtⁿ / text funtⁿ
3. Math funtⁿ
4. Date & Time funtⁿ
5. Financial funtⁿ
6. Sorting & Filtering funtⁿ
7. Data Validation
8. Text to columns
9. Conditional Formatting
10. Lookups
11. Pivot tables
12. Power ~~pro~~ pivot tables
13. Power query
14. Data Visualization

* Excel: - it's a powerful spreadsheet.

* Google sheets, ... other are the server based.

* Structured data - is a tabular data

} Advance Excel

15. AI with Excel
16. Dashboard & report generation / insights

* Key compounds of excel

* Types of data in excel

- Text - Names categories
- Numbers - Sales, quantity
- Dates - time based analysis
- Boolean - (1) True, (0) False
- Geographical data

- (1)
- (2)
- (3)
- (4) Pivot tables
- (5) Sorting & Filtering
- (6) data validation

Date: - 24.09.2026

Day: - Thursday

* Function: - Set of instructions / set of code is already Pre-defined.

* There are 3 main components of function:

- function Name
- Num of inputs
- Return value

Date: - 23.09.2020.

* Set up Row 1 (Main-Header):

- select cells A1 to C1
- on the Home tab, click Merge & center
- set the background color to light blue. using fill color

Bucket tool:

- Type MS-OFFICE to Bold and change the Font color to dark Blue and also font size should increase (20)

* Set up Row 2 (sub-header):

- MS-WORD: A2 to B2 → Merge & center → Bold Font → Font Color dark purple → Box fill with light purple → Font size (14)
- MS-Excel: C2 to D2 → Merge & center → Bold Font & size (14) → Color font → Box color Light Brown.
- MS-power point: E2 cell → Merge & center → Bold Font & size (14) → Color font Green → Box color Light Green.
- MS-Access: F2 to G2 → Merge & center → Bold Font & size (14) → Color font dark purple → cell Box fill with light Purple.

* Set up Row 3 (Elements):

- Documents & LETTERS in A3: B3 cells and Bold the font. Fill color to the Both cells Blue under MS-Word.
- Formulas & data tables in C3: D3 cells and Bold the font. Fill color to the Both cells Brown under MS-Excel
- Animations in E3 cell and Bold the font. Fill the color to the cell Green. Border the cells A1: G3
- Table design & Form design in F3: G3 cells and Bold the font. Fill color to the Both cells Blue under MS-Access

MS OFFICE

MS-WORD

MS-Excel

MS-POWERPOINT

MS-ACCESS

Documents Letters

Formulas data tables

Animations table

Form

Design design.

Date : 24.09.2026

Excel Functions:-

Given Name : Ram

1. **Upper()** : This function converts all letters in a text into capital letters.

Syntax : UPPER (text)

Ex : UPPER(A2), UPPER("Ram")

Output : RAM

2. **lower()** : This function converts all letters into small letters.

Syntax : Lower (text)

Ex : lower(A2), lower("Ram")

Output : ram

3. **Proper()** : This converts first letter of each word that is selected into capital letter.

Syntax : PROPER (text)

Ex : PROPER(A2), PROPER("Ram")

Output : Ram

4. **LEN()** : it counts the no. of characters in a text and also space counted as well.

Syntax : LEN (text)

Ex : LEN(A2), LEN("Ram")

Output : 3

5. **MID()** : it extracts a specific no. of characters from the middle of the text, starting from a position that we specify.

Syntax : MID(text, start_num, num_chars)

Ex : MID(A2, 2, 2) = MID("Ram", 1, 2)

Output : MI

6. **RIGHT()** : it extracts a specified no. of Characters from the right side of a text.

Syntax : **RIGHT(text, num_char)**

Ex : **RIGHT(A2, 2)**, **RIGHT("RaM", 2)**

Output : am

7. **LEFT()** : it extracts a specified no. of Characters from the left side of a text.

Syntax : **LEFT(text, num_char)**

Ex : **LEFT(A2, 2)**, **LEFT("RaM", 2)**

Output : Ra

8. Dividing the text into 1st half and 2nd half :

* it can be used when we need to split a text into two parts.

→ For even numbers :

USHA (4 chars) : NAME

1st half : Syntax : **LEFT(text, LEN(text)/2)**

Ex : **LEFT(A2, LEN(A2)/2)**

Output : US

2nd half : Syntax : **RIGHT(text, LEN(text)/2)**

Ex : **RIGHT(A2, LEN(A2)/2)**

Output : HA

* For odd numbers :

NAME : Mounika (7 Char)

Here the text has an odd no. of characters. it cannot be divided into two equal halves.

So, **ROUNDUP()** function should be used in any one of the half

1st half - Syntax : $\text{LEFT}(\text{text}, \text{ROUNDUP}(\text{LEN}(\text{text})/2, 0))$
Ex : $\text{LEFT}(A2, \text{ROUNDUP}(\text{LEN}(A2)/2, 0))$
output : Moun

2nd half - Syntax : $\text{RIGHT}(\text{text}, \text{LEN}(\text{text})/2)$
Ex : $\text{RIGHT}(A2, \text{LEN}(A2)/2)$
output : iKa
